Dear CurrentWare client,

CurrentWare has recently engaged with White Tuque, a cybersecurity firm based in Ontario, Canada and Illinois, USA, to conduct a penetration test of its software platform. As a company that provides endpoint security and productivity solutions, CurrentWare understands the importance of proactively identifying and mitigating security vulnerabilities.

The penetration testing engagement was conducted in accordance with industry best practices and aligned with recognized frameworks such as OWASP Top 10, and MITRE ATT&CK. The scope included both internal and external testing of the CurrentWare product environment, simulating real-world attack scenarios to assess the resilience of its systems.

All findings from the assessment have been reviewed by the CurrentWare security team, and appropriate remediations have been applied where necessary. The engagement demonstrated CurrentWare's commitment to safeguarding its platform and providing assurance to its clients.

A summary of the penetration testing results or additional information can be provided by your CurrentWare representative upon request.

Sincerely,

Laura Payne  
CEO & Head, Security Consulting  
White Tuque
